I'm a pre-final-year CSE student at VIT Vellore, graduating in 2028. I build web products and applied AI tools, with experience contributing to MyPerro and student-led engineering projects.

EDUCATION

Vellore Institute of Technology — Vellore, India

B.Tech in Computer Science and Engineering – AI & Data Engineering — *Aug. 2024 – May 2028*

CGPA: 9.02/10; pre-final-year student, expected graduation in 2028.

- Coursework: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS, Machine Learning, Computer Architecture, Distributed Systems, Concurrency & Synchronization.

TECHNICAL SKILLS

Languages: Java, C++, Python, JavaScript, TypeScript, SQL, Solidity
CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS, Distributed Systems, Concurrency & Synchronization, Software Design, Synchronization Primitives
Systems & Backend: FastAPI, Node.js, Express.js, PostgreSQL, Redis, REST APIs, Socket.IO, Async I/O, Multi-threading, Web3.py
AI/ML: TensorFlow Lite Micro, XGBoost, SHAP, LangChain, FAISS, RAG Pipelines, Groq API, Scikit-learn, Pandas, NumPy
Tools & Platforms: Git, GitHub, Docker, GitHub Actions, Postman, Hardhat, Vercel, Railway
Frontend: React.js, Next.js, D3.js, Vite, Tailwind CSS

EXPERIENCE

MyPerro — Remote / VIT-TBI

Software Developer | Aug. 2024 onward; intern, core member, now occasional

- Part-time intern through December 2025; became a full-time core member in 2026.
- Now contributes when relevant work arises, following the full-time core-member involvement in 2026.
- Contributed to product interfaces, brand creatives and presentation assets.

IEEE Computer Society – VIT — Vellore, India

Senior Core Member - Technical & Design — *February 2025 - October 2026 (completed)*

- Contributed to IEEE CS-VIT chapter platforms and event interfaces, including HackBattle.
- Collaborated with technical and design teams on frontend work, event experiences and member guidance.
- Completed tenure on 26 October 2026.

PROJECTS

SentinelMesh - Team hackathon prototype | Python, MQTT, Flask, React, scikit-learn

- Contributed to the team prototype; specific individual module ownership is not yet confirmed.
- The checked hardware-node runtime publishes telemetry over MQTT and uses explicit thresholds for edge scoring. A separate backend classifier loads model artifacts; the React dashboard presents incidents and mesh information.
- ESP32/TFLite and ESP-NOW appear in the README vision. The reviewed Python scorer does not establish C++ on-device inference, hardware latency, throughput or node-failure tolerance results.
- This is prototype implementation evidence, not a deployed security system or production resilience validation.

ExamChain - Team hackathon prototype | React, FastAPI, PostgreSQL, Redis, Solidity, Web3.py

- Contributed to this examination-infrastructure prototype; individual module ownership remains to be confirmed.
- The overall implementation explores encrypted question vaults, Merkle-root locking and session workflows.
- FastAPI services, PostgreSQL and Redis support the backend; a no-backend browser demo supports review.
- Solidity contracts and QR credential routes explore tamper-evident result verification.
- A deployed frontend is not evidence of production exam security, measured concurrency or guaranteed integrity.

NetraAI - Prior resume project | Python, XGBoost, SHAP, FastAPI, Streamlit

- The prior resume describes a fraud-detection pipeline with XGBoost, SHAP and a Mule Lifecycle Classifier.
- Its dataset, individual contribution and benchmark results were not independently verified in this audit. No accuracy, throughput or latency result is asserted here pending supporting evidence.

ACHIEVEMENTS

- **2nd Place, Alpha Forge 3.0 Hackathon** *(out of 200+ teams):* Built **Vivayu / AgriGPT** – an AI + IoT agricultural diagnostic system with multi-sensor data pipelines, XGBoost inference, LangChain + FAISS retrieval, and voice-first RAG workflows on Groq API.
- **Exemplary Performance, WomenTechies'26 – GDG On Campus VIT:** Engineered a full-stack technical solution under a **36-hour deadline** as part of **Team Togepi**, recognized for engineering depth and collaborative problem-solving.
- **Competitive Programming:** Solved ***300+*** **DSA problems** in Java/C++ across arrays, trees, graphs, dynamic programming, binary search, greedy, and hashing; focused on medium-to-hard difficulty; actively practicing on LeetCode and Codeforces.
